Art Unit: 2682

Allowable Subject Matter

Claims 1-19, 23, 26-28, 39-44 and 55 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 1 and 39 teach towards an apparatus for transmission coordination. comprising a first radio transceiver operating in accordance with a first communication protocol and using a frequency band and communicating with a base station in accordance with the first communication protocol, a second radio transceiver operating in accordance with a second communication protocol and using the frequency band, and a coordinator associated with the base station for operating the base station to transmit command signals, in turn, activating the first radio transceiver, deactivating the first radio transceiver, activating the second radio transceiver, and deactivating the second radio transceiver and wherein a first communication utilizing the first communication protocol and a second communication utilizing the second communication protocol are carried out at the same time, and further wherein the second radio transceiver only transmits while the first radio transceiver is not transmitting and the first radio transceiver only transmits while the second radio transceiver is not transmitting. Claim 3 adds using a first and second 2.4 GHz transceiver, the first being an 802.11 transceiver communicating with a base station which provides control signals to the terminal to cause it to switch between the first and second transceivers.

Claims 14, 18 and 25 teach towards a portable data communications terminal using a first and second transceiver in the same band, the first communicating with a

base station and having a power save mode, wherein a coordinator associated with a common housing for the transceivers deactivates the first transceiver and activates the second when the first transceiver is in a power save mode.

Claim 23 further discloses a look-ahead mode, which the specification and subsequent communication from the applicant defines as scanning subsequent time slots of the other system to determine the presence of interfering transmissions prior to original transmission on a given protocol.

Claim 25 further teaches a power saving mode in the first protocol including active and dormant time periods, said dormant time periods including communication via the second communications protocol with slave devices, and claim 26 adds controlling said device comprises providing a signal indicating that said active time period will commence following a predetermined time interval and terminating operation according to said second data communication protocol during said predetermined time interval.

Claims 2, 4-13, 15-17, 19, 27, 28, 39-44 and 55 are allowed as being dependent on the claims noted above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
